

# Animation Director™ (AD)

## Minimum Requirements

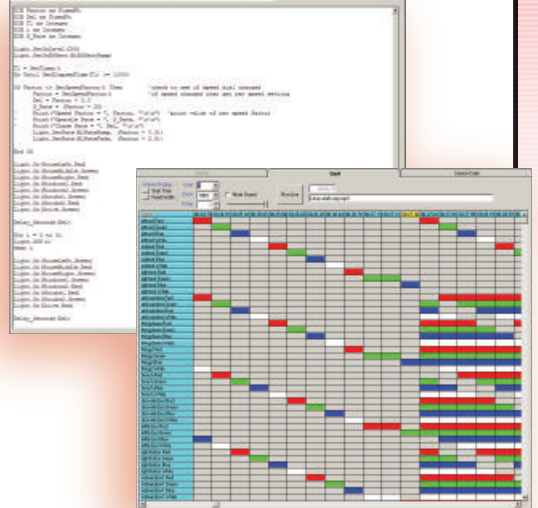

- Intel™ Pentium™ Pro 300MHz/AMD™ K6-2 300Mhz
- Windows™ 98SE or later
- Video resolution 1024x768 or higher
- 32 MB of memory
- 10MB of disk space (doesn't include space for media or show files)
- CD drive for software installation
- Serial port (hardware or USB-based) capable of at least 56Kb/s

## Recommended Configuration

- Intel™ Pentium™ 3 1.0GHz/AMD™ Thunderbird 1.0Ghz
- Windows™ XP or later
- Video resolution 1024x768 or higher
- 256 MB of memory
- 10MB of disk space (doesn't include space for media or show files)
- CD drive for software installation
- Hardware serial port capable of at least 56Kb/s

## Design and program never-before-seen displays on your PC with unparalleled flexibility and power

Animation Director (AD) is a totally unique and powerful software application for creating innovative, ever-changing, multi-media displays. Choose either our grid-based graphical user interface (GUI) or our robust Animation Control Language (ACL) to build your show. Animation Director is the only tool that gives you all the power you need to control lights, music, sounds and special effects to turn your display into a dazzling work of art. Your visitors will experience unparalleled entertainment and leave with a lasting impression they want to share!

The point-and-click interface within Animation Director enables you to quickly and effectively create a show, save multiple routines in your show, name lighting channels, inputs and outputs, organize channels into groups or use other features to manage your animation and lights. Use AD's grid-based interface to quickly create routines or use ACL to build routines with the most flexibility and power.

Synchronization of music, sounds and special effects can be timed to 1/100 second. Each individual lighting channel can also be timed and individually controlled. Each lighting channel has up to 255 intensity settings for maximum load management and visual impact.

Want to see how your show looks on your home or business? Our built-in "Visualizer" overlays the lighting and animation so you can preview the show over the digital image of your home or business.

Animation Director works directly with the Monster Brain Animation Processor (MB) or it can directly manage our series of Light Controllers (LC 4/8/16/64) with commands unique to each controller.

For a detailed overview of the many features, applications and benefits of Animation Director, please visit [www.animatedlighting.com](http://www.animatedlighting.com) to find the **Animation Director Overview** in our Technical Support section.
